Administrators Only

Description of the Project

Our App is a React-Express based application for a restaurant that allows users to connect with the restaurant, browse its menu and place orders. The application has 2 major components.

First one is the Restaurant side component which allows admin user to manage the menu by adding, editing, and removing dishes that the restaurant serve.

The second component is the client or the user component. This provides users the functionality to browse the menu, look at individual dishes and place an order for one or more dish.

All the users need to login before they can place an order. Once logged in they can place an order, view their past orders, and make amends to their profile. New users can sign-up and gain access to the application.
